## **Study programme: PhD in Biology**

Level: Doctoral degree

Course title: Bioinformatics in the study of nucleic acids and proteins

Lecturer: dr Edward Petri, dr Jelena Purać

Status: elective

**ECTS**: 15

**Requirements**:

# Learning objectives

The course will introduce students to bioinformatics concepts and methods used in the analysis of nucleic acids and proteins in biological research.

#### Learning outcomes

After completing the course, students should be able to understand and use different commercially available programs for the analysis of nucleic acids and proteins. Also, students should learn to apply bioinformatics to solve specific biological problems.

## Syllabus

#### Theoretical instruction

Bioinformatics is an integrated discipline of biology, mathematics and programming, which has broad applications in various scientific fields. Most of today's biological research uses some biological databases, as well as methods for studying the organization, structure, function and evolution of biological macromolecules. During this course, students will learn the most important concepts, methods and tools used in bioinformatics analysis of nucleic acids and proteins. Students will learn about the following topics: a) biological databases of nucleotide and amino aced sequences and how to search for information in biological databases b) database similarity searching c) determining alignments for nucleotide and amino acid sequences, d) determination of phylogenetic trees, e) analysis of the structure and function of biological macromolecules and f) the links between genes and the structure of biomolecules – the structural basis of genetic conservation.

## Practical instruction

Students will be required to write term paper that will be consistent with the theoretical material covered in the course, as well as the subject they deal with for their doctoral research.

## Literature

Vinay Sharma (2008) Text Book of Bioinformatics, Rastogi Publications

Jenny Gu, Philip E. Bourne (2011) Structural Bioinformatics, second edition, Wiley-Blackwell

Weekly teaching load				Other:
Lectures: 5	Exercises:	Other forms of teaching:	Student research: 5	
Teaching methodology				
Theoretical instruction will be taught in lectures or consultations. Practical instruction will be done using				
computers.				
Grading method (maximal number of points 100)				
Term paper: 70	) points			
Course activity	· 30 points
