

<b>Level: Bachelor</b>				
<b>Course title:</b> Enzymology			<b>Subject code:</b> B-303	
<b>Status:</b> Obligatory				
<b>ECTS:</b> 6				
<b>Requirements:</b> none				
<b>Learning objectives</b>				
To understand the kinetics and mechanisms of action of enzymes, to become familiar with the basic methods of studying enzymes, and to appreciate how individual reactions are controlled and integrated into the metabolic pathways of the cell. Acquired theoretical and experimental knowledge will enable students to find appropriate employment in different development, scientific-research laboratories, or to continue their further studies in biochemistry or related disciplines.				
<b>Learning outcomes</b>				
Upon successful completion of this course, students should be able to: explain relationship between the structure and function of enzymes; explain how enzymes are able to increase speed of an biochemical reaction in sense of thermodynamics, kinetics and molecular interactions; use catalytic strategies in interpreting mechanisms of enzymatic action; interpret and explain significant mechanisms of regulation of enzymatic action and specifies importance of enzymes in regulation of metabolism; apply appropriate methods for determination of catalytic parameters and activity of enzymes and resolve problems considering kinetics and thermodynamics of enzymatic reactions; analyze options for applying enzymes and their inhibitors in medicine and various industries; apply theoretical, practical, IT and statistical knowledge during processing experimental results and their correct interpretation.				
<b>Syllabus</b>				
<i>Theoretical instructions</i>				
Introduction to enzymology, basic properties of enzymes. Classification and nomenclature of enzymes. Enzymes kinetics. Inhibition. Influence of temperature and pH on enzymatic reactions. Basics of catalysis. Mechanisms of enzymatic reactions. Regulatory enzymes. Regulation of enzymatic action. Enzymes in organized systems. Ribosomes and abzymes. Databases for enzymes. Use of enzymes in clinical diagnostics, biotechnology, pharmaceutical and food industries.				
<i>Practical instructions:</i>				
Experimental and computer exercises in generating, analysis and processing of kinetic data in accordance with theoretical program of the course.				
<b>Weekly teaching load</b>				<b>Other:</b>
<b>Lectures:</b> 3	<b>Exercises:</b> 3	<b>Other forms of teaching:</b>	<b>Student research:</b> /
