| Study programme(s): Mathematics | | | | | | | |
|---|---------|---------|----------------------------|------|---------------------|--|--------|
| Level: doctoral studies | | | | | | | |
| Course title: Universal algebra 2 (AL-19) | | | | | | | |
| Lecturer: Petar V. Marković | | | | | | | |
| Status: elective | | | | | | | |
| ECTS: 10 | | | | | | | |
| Requirements: Universal algebra 1 (AL-18) | | | | | | | |
| Learning objectives: | | | | | | | |
| Acquainting the students with advanced concepts, results and proof techniques of Universal algebra. | | | | | | | |
| Learning outcomes: | | | | | | | |
| The student will acquire understanding of advanced concepts and methods which allow conducting | | | | | | | |
| research in the area of universal algebra, particularly of the classification of finite algebras. | | | | | | | |
| Syllabus: | | | | | | | |
| Polynomial clones and induced structure of a subset of the algebra. Theorem by Palfy and Pudlak. | | | | | | | |
| Fundamental theorem of finite algebras. Basic properties of minimal sets. Structure of minimal algebras. | | | | | | | |
| Five types. Type 2. Nonabelian types. E-minimal algebras. Types of covering in a congruence lattice. | | | | | | | |
| Subtraces and snags. Nonabelian covers and pseudo-complements. Semidistributive laws (meet-, join-). | | | | | | | |
| Lattice theoretic characterization of nonabelian covers. Solvability and congruence meet- | | | | | | | |
| semidistributivity. Willard terms and the Willard finite basis theorem. Congruence modularity and | | | | | | | |
| distributivity. Free spectra. Generative complexity. | | | | | | | |

| Teaching methodology | | | | | | | |
| Lectures are presented using classical teaching methods. The students are given homework problems | | | | | | | |
| which are discussed in class throughout the semester. On one colloquium the students demonstrate their | | | | | | | |
| ability to independently solve problems related to the course material. The final exam is oral and the | | | | | | | |
| student is supposed to demonstrate a general understanding of the presented theoretical material. | | | | | | | |
| | | Grading | method (maxima | l nu | mber of points 100) | | |
