

Level: bachelor				
Course title: Regional Geography of America and Australia				
Status: Obligatory				
ESPB : 7				
Requirements: Passed exams from Physical and Social Geography from the first two years of bachelor studies				
Learning objectives: Introducing students to elementary physical-geographic and socio-geographic characteristics of the North-, Middle- and South–American, Australian regions and countries as well as territories of the Oceania, both as regions and as continents. Students should be able to determine certain regions of a continent and determine particular geographic regions within certain countries of the continents mentioned above.				
Learning outcomes: Functional knowledge and application of the subject in all geographic disciplines, choosing examples from the North-, Middle- and South-America and Australia through synthetic methods.				
Syllabus <i>Theoretical instruction</i> Overall geographic presentation of the continents of America and Australia: through their tectonic-geological structures, relief, climatic, hydrographic, paedologic-biogeographic and socio-geographic characteristics, with special insight into ethnicity of particular regions and continents. <i>Practical instruction</i> Practical application of study units presented in thematic charts and diagrams, and where possible, application of theoretical knowledge through some exercises. Filling out the Practice-charts created for this course. Elaboration of written assessments with topics strictly connected to regional analysis (as homework).
