

<b>Study programme(s):</b> Computer science				
<b>Level:</b> academic bachelor studies				
<b>Course title:</b> Introduction to Software engineering				
<b>Lecturer:</b> Zoran D. Budimac				
<b>Status:</b> obligatory				
<b>ECTS:</b> 6				
<b>Requirements:</b> None				
<b>Learning objectives</b> Overview of elementary and advanced phases and techniques of software development. Preparation of students for teamwork in characteristic phases of software development: requirements, analysis, design, implementation, elements of management, and quality control.				
<b>Learning outcomes</b> <i>Minimum:</i> Students are expected to present knowledge and ability of its application, and to be able to work as a team member on the development and delivery of high quality software products. <i>Desirable:</i> Students are expected to present good knowledge, but also ability for critical analysis and application of knowledge from the field, ability to work both individually and as a team member on the development and delivery of high quality software products, and ability to analyze their quality level.				
<b>Syllabus</b> <i>Theoretical instruction:</i> Basic notions and definitions. Software quality criteria. Models and possible views on the software development process. Object-oriented analysis and design. Formal specification. Principles and methods of implementation. Software testing. Software metrics. Reverse engineering. <i>Practical instruction</i> Analysis and improvement of requirements specification. Training in methods of software cost estimation. Training in object-oriented analysis. Training in description of software product by methods of formal specification. Practical work on software testing. Practicing of methods of software quality measurement.				
<b>Literature</b> <i>Recommended</i> <ol style="list-style-type: none"> <li>1. Zoran Budimac, Mirjana Ivanovic, Zoran Putnik: <i>Advanced Topics in Software Engineering</i>, University of Novi Sad, Faculty of Science, Department of Mathematics and informatics, Novi Sad, 2007.</li> <li>2. Ian Sommerville: <i>Software Engineering</i>, 9th Edition, Pearson Education Limited, 2010.</li> </ol>				
<b>Weekly teaching load</b>				
Lectures: 2	Exercises: 1	Practical Exercises: 1	Student research:	Other:
<b>Teaching methodology</b> Classic methods of teaching are used such as use of presentations and video-beam. All of the presentations are also available on a web-site of the Department as a static PDF files for printing, but also as dynamic slide-shows and electronic lessons. At theoretical exercises, applicable methods for individual phases of software development are presented and explained. At practical exercises, presented methods are practiced by students using teamwork.				
<b>Grading method (maximal number of points 100)</b>				
<b>Pre-exam obligations</b>	<b>Points</b>	<b>Final exam</b>	<b>points</b>	
Assignments	60	Oral exam	40
