Study program: Information Technologies

Type and level of study: Bachelor

Subject title: NoSQL Databases

Teacher (for lectures): Danijela N. Boberić Krstićev

Teacher/assistant (for practice): Lidija Fodor

Subject status: obligatory

Number of ECTS: 6

Condition: none

# Subject goal

Introduction with basic principles and concepts of non-relational databases

### Learning outcome

At the end of the course, it is expected that students demonstrate a clear understanding of the theoretical basis of non-relational databases and are able to develop application based on non-relational database

# **Subject content**

Theoretical lectures

Introduction with basic principles and concepts of non-relational databases. Discussing problems of large databases and problem of scalability. Introduction to different kind of NoSQL databases. Key-value databases. Column - oriented databases. Document - oriented databases. Graph databases. CRUD operations. Query languages. Indexing. Managing integrity of data. NoSQL databases and cloud computing. Performances of NoSQL databases

Practical lectures

Analysis of concrete implementation of different kind of NoSQL databases such as MongoDB (document - oriented database), HBase (column - oriented database) and Neo4J (graph - oriented databases)

### Literature

- 1. Pramod J. Sadalage, Martin Fowler, "NoSQL Distilled: A Brief Guide to the Emerging World of Polyglot Persistence", Addison-Wesley Professional, 2012
- 2. Eric Redmond, Jim R. Wilson, "Seven Databases in Seven Weeks: A Guide to Modern Databases and the NoSQL Movement", Pragmatic Bookshelf, 2012

Number of classes of active teaching weekly during semester

Lectures:	Practice:	OTT:	Research work:	Other classes:
2	2			

### **Types of teaching**

In the lectures, classical teaching methods using video beam are used to present the topics. In practice, classical teaching methods, using video beam and computers with the necessary software installed are used to practically train skills by getting to know the recommended tools. The premise for successful exercises is the existence of a sufficient number of computers so that each student can work individually.

Assessment (maximum 100 points)						
Pre exam requirements	points	Final exam	points			
project	70	oral exam	30
